EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Gregory Schivley on December 20, 2004.

The application has been amended as follows:

In claim 1, line 26, "the second wiring patterns have metal wiring at least partially metal wiring" has been changed to –the second wiring patterns have metal wiring at least partially—

Application/Control Number: 10/666,954 Page 3

Art Unit: 2871

Allowable Subject Matter

2. Claims 1-16 are allowed.

- The following is an examiner's statement of reasons for allowance:
- 4. The prior arts of record do not anticipate or render obvious to one skilled in the art an electro-optic apparatus comprising various elements as claimed, more specifically the first substrate including second wiring patterns connecting the mounting terminals to the first inter-substrate electric connection terminals and the second substrate including an optical reflection film in which light transmission holes are formed at part of an area overlapping with an area where the first driving electrodes and the second driving electrodes are opposed is formed at a lower-layer of the first driving electrodes of the first substrate, and a color filter layer is formed between the optical reflection film and the first driving electrodes, and the second wiring patterns have metal wiring at least partially formed of the same metal film as the optical reflection film.

The closest reference USPAT 6,747,723 discloses a liquid crystal device comprising an electrode provided on the first substrate for supplying a voltage to the liquid crystal, a first lead connected to the electrode, and a driver IC chip connected to the first lead, wherein the first lead comprises an underlying film, a metal film which is formed on the underlying film and a metal oxide film which is deposited on the metal film and which is patterned so that the edge portion of the metal oxide film comes into contact with the underlying film. However, the reference alone or in combination with any other prior art references fail to teach or suggest the claimed electro-optic apparatus wherein the second substrate including an optical reflection film in which light

Art Unit: 2871

transmission holes are formed at part of an area overlapping with an area where the first driving electrodes and the second driving electrodes are opposed is formed at a lower-layer of the first driving electrodes of the first substrate, and a color filter layer is formed between the optical reflection film and the first driving electrodes, and the second wiring patterns have metal wiring at least partially formed of the same metal film as the optical reflection film.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tarifur R Chowdhury whose telephone number is (571) 272-2287. The examiner can normally be reached on M-Th (6:30-5:00) Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
